Mobile app: Watchlist tab

Private research dashboard · Research only — not financial advice

[START HERE](#)

The building blocks (read this first)

Every screen below is built from the same handful of ideas. Learn them once and all four features become easy to read.

Momentum Score (0–100)

A single number describing how strong a stock's **trend** is right now. It measures the trend — **not** today's price move, so a stock can be **down on the day and still score Strong** (a small pullback inside an uptrend). It is built from:

Component	Max points
Moving averages stacked 10>20>50 and all rising	25
Price above all three moving averages	15
5-day % change (capped at +10%)	15
Within 5% of the 52-week high	15
20-day % change (capped at +30%)	10
RSI(14) sitting in the healthy 50–70 zone	10
Volume ≥ 1.5× the 20-day average	10

Bands: **Strong** ≥ 80 · **Building** 60–79 · **Watching** 40–59 · Skip < 40

Δ since fired / Δ 1d

How the **score** moved (not the price). ▲ **+5 or more** = momentum building; ▼ **–5 or more** = fading; grey (–4 to +4) = noise. On the watchlist it's measured versus the day the signal fired; on ASX Market it's versus yesterday.

Buyers %

Share of recent volume trading on up days vs down days (accumulation). **55%+ reads green, under 45% red**. A ✓ means it is **tick-verified from live IBKR order flow**; without ✓ it is a daily-bar *proxy*, so treat it as directional, not exact.

⚡ Buy pressure

Lights up only on real order-flow data: **verified buyers ≥ 50% and momentum strong** (score ≥ 80) or sharply rising. It never fires on the proxy alone.

Strength & 30d sparklines

Strength = the day-by-day history of the 0–100 score (builds over time). **30d** = the 30-day price trend (green = up over the window, red = down).

Conviction (watchlist only)

How a signal has behaved **since it fired**. The number on the pill is a 0–100 conviction score that sets the order within each group:

Confirming

holding above fire price, buyers in control

Holding

price ok, demand unconfirmed

Decaying

momentum fading

Invalidated

broke structure / below entry

Access: All screens are behind a private password (a secure session cookie on the website; the same login in the app). Everything is **research only — not financial advice**.

FEATURE 1

Signal Watchlist

Website: [/signals](#) → Signal Watchlist tab (default) · App: Watchlist → Signal Watchlist

What it is

The core screen. It tracks the bot's **open signals from the curated watchlist (~46 GREEN_LIST names)** — missed **BUY** signals that weren't executed, plus executed **SELL** signals — from the **last 90 days**. Instead of a generic screener, it ranks how each signal has **behaved since it fired** using conviction, momentum, buyer accumulation and price action. This is the one universe with a **backtested edge**.

Layout, top to bottom

- **Summary pills:** Watched · **Confirming** · **Decaying** · **Invalidated** counts.
- **Filter pills:** All · Confirming · Holding · Decaying · Invalidated (tap to filter).
- ⚡ **Buy setups** — up to 8 cards; the highest-quality entries right now (rules below).
- ▲ **Gaining** / ▼ **Losing momentum (1d)** — two short mover columns.
- **Main table** — every open signal.

Main table columns

Column	Meaning
Symbol	Ticker with a BUY / SELL badge; a ⚡ marks buy pressure.
Conviction	Confirming / Holding / Decaying / Invalidated + 0–100 score. Primary rank.
Score	Current momentum score (0–100) with its band.
Δ since fired	Score change vs the fire day, shown as (fire→now).
Strength	Sparkline of the score's history since firing.
30d	30-day price trend sparkline.
Signal → Current	Fire price vs current price.
10d Trend	Last 10 daily directions; the streak badge glows at 3+ days one way (red streaks = sustained selling).
Date	When the signal fired.

⚡ Buy Setups — the exact rules

Curated watchlist only. A name must pass **all** of these (thresholds come from back-testing the GREEN_LIST):

Rule	Threshold
Momentum score	≥ 80
1-day score Δ	≥ 4 (rising)
Aggregated buyers %	$\geq 50\%$
Live intraday buyers % (when streaming)	$\geq 55\%$ as confirmation (blank = allowed)
RSI	≤ 78 (not overbought)
Structure	conviction not Invalidated

Each card also shows a 0–100 **opportunity score** (a weighted blend of score, Δ , live & aggregated buyers) used to rank the cards. Back-test optimum on GREEN_LIST: score $\geq$ 80, $\Delta\geq$ 4, buyers $\geq$ 50%, RSI $\leq$ 72 → **+0.62%/trade out-of-sample, profit factor 1.26**.

Worked example — reading a row

SYMBOL	CONVICTION	SCORE	Δ SINCE FIRED	STRENGTH	BUYERS	SIGNAL→NOW
WES ⚡	BUY	Confirming 82	85 Strong ▲ +6 (78→85)		58% ✓	\$62.10 → \$65.40

How to read WES above:

- **BUY · Confirming 82** — an open buy signal still holding above its entry, strongly confirmed.
- **Score 85 Strong, ▲ +6 (78→85)** — momentum is high *and* has climbed 6 points since the signal fired.
- **Buyers 58% ✓** — the ✓ means this is real IBKR order flow, and buyers dominate recent volume.
- ⚡ — all buy-pressure conditions are met, so WES will also appear in the **Buy Setups** cards.
- **\$62.10 → \$65.40** — up ~5.3% since firing; the setup has followed through.

Contrast: a fading signal

XYZ	SELL	Decaying 41	63 Building ▼ -8 (71→63)		39%	\$4.20 → \$3.95
-----	------	-------------	--------------------------	-------------	-----	-----------------

Decaying conviction, score falling (▼ -8), buyers under 45% (proxy, no ✓), price below the fire level — momentum is rolling over.

How to use it

- Start with the **Buy Setups** cards — these are the only entries that passed the full back-tested filter.
- Use **Conviction** as your primary sort; prefer **Confirming** with a rising **Δ since fired**.
- Trust a **Buyers %** with a ✓ far more than one without.
- Watch the **10d Trend** tape — a glowing red streak is a warning even if the score is still high.

Push alerts: the server sends a notification when a curated name newly qualifies as a ⚡ Buy Setup (once per symbol per day, during ASX hours).

Empty state: "Missed BUY signals and executed SELL signals from the last 90 days will appear here."

FEATURE 2

ASX Market

Website: [/signals](#) → ASX Market tab · App: Watchlist → ASX Market (Market mode)

What it is

An **end-of-day momentum ranking of the whole ASX** — 500+ liquid names scored with the **same 0–100 engine** as the watchlist and ranked **100 → 0**. It is a **broad-market research view**. Important: back-tests found **no stable edge across the whole ASX** (the edge lives in the curated watchlist), so treat this as context, not signals.

Controls & layout

- **Header:** "EOD scan: {time} · {N} stocks scored · ranked 100 → 0".
- **Summary pills:** Scored · Liquid · Strong (≥ 80) · Rising ▲.
- **Filter pills:** Liquid · All · Strong · Rising ▲ · Buy pressure ⚡.
- **Min market cap (\$M):** type a number to hide small caps; Clear resets.

Table columns

Column	Meaning
#	Rank (highest score first).
Symbol	Ticker; ⚡ buy pressure; THIN badge = illiquid.
Score / Δ 1d	Momentum score and its change vs yesterday.
Strength / 30d	Score-history and 30-day price sparklines.
Price / %	Live price and today's actual move.
1M · RSI · R.Vol · Mkt Cap	1-month performance, RSI(14), relative volume, market cap.

Filter rules

Pill	Shows
Liquid (default)	$\geq \$50\text{M}$ market cap AND $\geq \$250\text{K}$ daily turnover
All	Everything, including THIN names
Strong	Score ≥ 80
Rising ▲	Liquid and score $\Delta 1\text{d} \geq +5$
Buy ⚡	Buyers in control and score ≥ 75

SYMBOL SCORE Δ1d PRICE/% 1M RSI MKT CAP

3 **PLS** ⚡ **88 Strong** ▲ +7 \$3.10 -0.6% +18% 64 \$9.3B

Reading PLS: ranked #3 with a Strong, rising score and buy pressure — yet it's **down 0.6% today**. That's the key lesson: the score tracks the **trend**, so a Strong name can dip intraday. The 1-month +18% and $\Delta \blacktriangle +7$ confirm the uptrend is intact.

Push alerts: fire when a near-top name crosses into Strong (≥ 80) or jumps ≥ 15 points in a day with buyers in control.

FEATURE 3

Momentum Tracker

Website: [/signals](#) → Momentum Tracker tab · App: **ASX Market** → Momentum Tracker mode

What it is

A **forward-tracking observation list**. When a liquid ASX name **newly qualifies** as Strong or Rising, it's added here and then followed over time — entry price/score vs now, % since, days tracked — exactly like watching a fired signal. It answers "which momentum names actually held up, and which faded?"

Tracking / observation only. Broad-ASX momentum has **no backtested edge** (unlike the curated Signal Watchlist), and buyers here is a daily-bar accumulation *proxy*, not live IBKR order flow. Research only — not financial advice.

What puts a stock on the list

Trigger	Entry condition
STRONG	Score crosses ≥ 80
RISING	Score $\Delta \geq 5$ with buyers (liquid names)

Columns

Column	Meaning
Symbol / Trigger	Ticker and why it qualified (STRONG or RISING).
Since	Date it first qualified (+ days tracked).
Entry → Now	Price when it qualified vs current price.
% since	Return since qualifying.
Score (now)	Current score and its change since entry.
30d / Mkt Cap	Price sparkline and size.
Status	Active · Cooling · Closed.

SYMBOL	TRIGGER	SINCE	ENTRY→NOW	% SINCE	SCORE	STATUS
CMM	RISING	16 Jun · 12d	\$8.42 → \$8.91	+5.8%	72 (+4)	Active

Reading CMM: it entered the tracker 12 days ago on a **Rising** trigger, is **+5.8%** since, its score is still climbing (+4), and it remains **Active** — a momentum name that has held up. A **Cooling** or Closed status would flag one that faded.

How to use it

- Use it to **observe and learn** which broad-market momentum persists — not as a buy list.

- Filter **Strong** vs **Rising** to compare fresh breakouts vs accelerating names.
- If a name here also lives on the curated **Signal Watchlist** with a  buy setup, that's the higher-conviction read.

FEATURE 4

ProfitScalper — PAPER · SHADOW TEST

Separate dashboard · linked from the site nav as **ProfitScalper**

What it is

A **stand-alone paper-trading dashboard** — **not** part of the live ProfitHunter bot and it places **no real orders**. It runs one clean strategy on the curated GREEN_LIST in isolation so you can watch, in real time, whether that strategy's edge holds up going forward. It keeps its own portfolio and state.

The strategy it shadows

Parameter	Value
Universe	GREEN_LIST (~47 curated ASX names)
Cadence	Weekly bars
Entry	Scanner filter flips from not-met → met: price > MA10 > MA20 > MA50 > MA200, EMA8 > EMA23, ADX > 25, +DI > -DI
Exit	Ride the trend until EMA8/EMA23 cross down
Start equity / slots	\$100,000 · max 8 positions
Sizing / cost	Aggressive (equity ÷ 8 per trade) · 0.2% round-trip

What the dashboard shows

- **Stat cards:** Equity · Total return · Cash · Open positions (n/8) · Closed trades · Win rate · Avg trade.
- **Strategy edge:** median 20-day-forward return, 20-day win rate, median MFE (best-case run-up), median MAE (worst-case drawdown), plus a per-symbol edge table.
- **Equity curve** chart.
- **Open positions** (symbol, shares, entry, last, value, P/L%, held-since) and **recent closed trades**.

EQUITY

\$104,820

+4.82% total return

WIN RATE (closed)

57%

Avg trade +0.9% · 7/8 slots used

How to use it: treat ProfitScalper as a live, honest scoreboard for the weekly strategy. Rising equity curve + positive median 20-day return + healthy win rate = the edge is holding forward. Because it's paper, you can trust the numbers without any capital at risk.

Footer on the dashboard: *"Paper trading only — no real orders. GREEN_LIST · weekly · full scanner filter · ride to EMA8/EMA23 cross-down · \$100k start · 8 slots · aggressive sizing · 0.2% round-trip. Updated weekdays after ASX close."*

SUMMARY

The four screens at a glance

Screen	Universe	Backtested edge?	Buyers data	Use it to...
Signal Watchlist	Curated ~46 GREEN_LIST signals	Yes (Buy Setups)	IBKR verified ✓ when available	Find and rank the best current entries
ASX Market	Whole ASX (500+)	No (context only)	Daily-bar proxy	See where broad-market momentum sits
Momentum Tracker	Liquid ASX qualifiers	No (observation)	Daily-bar proxy	Watch which momentum names hold vs fade
ProfitScalper	GREEN_LIST paper portfolio	Yes (weekly sim)	n/a	Verify the weekly strategy's edge, live & risk-free

Colour key used across the app

Confirming / Active / positive Holding / Rising / info Decaying / Cooling Invalidated / negative ⚡ buy pressure ✓ tick-verified buyers

A simple daily routine

1. Open **Signal Watchlist** → scan the ⚡ **Buy Setups** cards (the only back-tested entries).
2. Sanity-check each on **Conviction**, rising Δ , and a ✓ **Buyers %**.
3. Glance at **ASX Market** for broad context; **Momentum Tracker** to see which names are persisting.
4. Check **ProfitScalper** to confirm the underlying strategy edge is still trending up.
